1 General informations

1.1 Informations for your safety

We are pleased that you have decided for a high-class Guth Ventiltechnik product. With correct application and adequate maintenance, our products provide long time and reliable operation.

Before installation and initiation, please carefully read this instruction manual and the security advices contained in it. This guarantees reliable and safe operation of this product and your plant respectively. Please note that an incorrect application of the process components may lead to great material damages and personal injury.

In case of damages caused by non observance of this instruction manual, incorrect initiation, handling or external interference, guarantee and warranty will lapse!

Our products are produced, mounted and tested with high diligence. However, if there is still a reason for complaint, we will naturally try to give you entire satisfaction within the scope of our warranty. We will be at your disposal also after expiration of the warranty. In addition, you will also find all necessary instructions and spare part data for maintenance in this instruction manual. If you don't want to carry out the maintenance by yourself, our Guth Ventiltechnik - service team will naturally be at your disposal.

1.2 Marking of security instructions

Hints are available in the chapter "safety instructions" or directly before the respective operation instruction. The hints are highlighted with a danger symbol and a signal word. Texts beside these symbols have to be read and adhered to by all means. Please continue with the text and with the handling at the valve only afterwards.

Symbol	Signal word	Meaning
	DANGER	Imminent danger which will result severe personal injury or death.
	WARNING	Imminent danger which may result severe personal injury or death.
	CAUTION	Dangerous situation which may cause slight personal injury or material damages.
	NOTICE	An harmful situation which may result in damages of the product itself or of adjacent vicinity.
	INFORMATION	Marks application hints and other information which is particularly useful.

1.3 General designated use

The fitting is designed exclusively for the purposes described below. Using the fitting for purposes other than those mentioned is considered contrary to its designated use. Guth Ventiltechnik cannot be held liable for any damage resulting from such use. The risk of such misuse lies entirely with the user. The prerequisite for the reliable and safe operation of the fitting is proper transportation and storage as well as competent installation and assembly. Operating the fitting within the limits of its designated use also involves observing the operating, inspection and maintenance instructions.

1.4 Personnel

Personnel entrusted with the operation and maintenance of the tank safety system must have the suitable qualification to carry out their tasks. They must be informed about possible dangers and must understand and observe the safety instructions given in the relevant manual. Only allow qualified personnel to make electrical connections.

1.5 Modifications, spare parts, accessories

Unauthorized modifications, additions or conversions which affect the safety of the fitting are not permitted. Safety devices must not be bypassed, removed or made inactive. Only use original spare parts and accessories recommended by the manufacturer.

1.6 General instructions

The user is obliged to operate the fitting only when it is in good working order. In addition to the instructions given in the operating manual, please observe the relevant accident prevention regulations, generally accepted safety regulations, regulations effective in the country of installation, working and safety instructions effective in the user's plant.

2 Safety instructions

2.1 Intended use

The Single seat valve is used in the beverage and food industry, in pharmaceutical, bio-engineering, as well as in chemical engineering.

Inclined seat valves, Angle valves, T-valves, Cross valves, Loop valves and Tank outlet valves are used as manually or pneumatically controlled Shut-off valves, Change-over valves are used as Multi-port valves in industrial installations.

2.2 General notes

NOTICE - observe the operating instructions

To avoid danger and damage, the fitting must be used in accordance with the safety instructions and technical data contained in the operating instructions.

NOTICE

All data are in line with the current state of development. Subject to change as a result of technical progress.

2.3 General safety instructions

⚠ WARNING

Risk of injury by moving parts

Do not grab into the valve when the actuator is pressurized. Limbs can be crushing or amputating.

- Remove the control air line before dismantling.
- Ensure that the actuator is unpressurized.

⚠ WARNING

Risk of injury by moving parts

When dismantling the clamp coupling, the spring preloaded valve insert (air open - spring close) may incur serious injuries by jumping out of the housing.

- First pneumatically open the valve before disassembling the clamp coupling, so that upstroke the piston.
- Remove the valve core.
- Remove the control air line at valve insert.

⇒ Ensure that the actuator is unpressurized.

⚠ WARNING

Risk of injury by outflowing medium

Dismantling the valve or valve assemblies from the plant can cause injuries.

- Medias flowing through the leakage drain outlet are to be drained off without splashing into a discharge arrangement.
- Carry the disassembling only if when the plant has been rendered pressure-less and free of liquid and gas.

⚠ WARNING

ATEX - Guidelines

If the valve or the plant is operated in a potentially explosive atmosphere, the valid ATEX directive of the EC and the installation instructions in this operating manual must be observed.

**⚠ CAUTION**

When mounting the clamps, the max. torque must not be exceeded.
(see technical data)

**⚠ CAUTION**

To avoid air leaking, only use pneumatic connection parts that have an O-ring seal facing the even surface.

**⚠ CAUTION**

Before starting the system, the entire pipeline system must be thoroughly cleaned.

**⚠ CAUTION**

Steps should be taken to ensure that no external forces are exerted on the fitting.

3 Delivery, transport and storage

3.1 Delivery

- Immediately after receipt check the delivery for completeness and transport damages.
- Remove the packaging from the product.
- Retain packaging material, or expose of according to local regulations.

3.2 Transport

CAUTION

Risk of injury and damage to the product

During the transport the generally acknowledged rules of technology, the national accident prevention regulations and company internal work and safety regulations must be observed.

3.3 Storage

NOTICE

Damage to the product due to improper storage!

Observe storage instructions
avoid a prolonged storage

INFORMATION

Recommendation for longer storage

We recommend regularly checking the product and the prevailing storage conditions during long storage times.

- To avoid damage to seals and bearings,
 - products up to DN 125 / OD 5 inch should be stored horizontally for maximum 6 months.
 - products larger than DN 125 / 5 inch, should be stored in the upright position with the actuator on top.
- Don't store any objects on the products.
- Protect the products for wetness, dust and dirt.
- The product should be stored in a dry and well ventilated room at a constant temperature (optimal indoor temperature: 25 C ±5 ; indoor humidity data 70% ±5%).
- Protect seals, bearings and plastic parts for UV light and ozone.

4 Specification

4.1 Modular system

KI-Top control head		feedback unit	
			
Stainless steel hood	Transparent hood	Feedback unit with finger guard (E)	
Actuator manual	Actuator pneumatical		
			
	ø104	ø129	
Manual operation			
	ø167	ø230	
Valve inserts			
for Angle valves			for Changeover valves

Inclined seat valve	Angle valve		t-valve
			
	cross valve	Two-way-changeover valve	
Tank outlet valve			

4.2 Valve types

5 Function and operation

5.1 Description of function

Valve function:	<ul style="list-style-type: none"> Inclined seat valve, Angle valve, T-valve, Cross valve, Loop valve, Tank outlet valve <ul style="list-style-type: none"> Shut off fluid media in pipelines (see Fig.A and B) Changeover valve <ul style="list-style-type: none"> Control fluid media in pipelines (see Fig.A and B)
Operation:	<ul style="list-style-type: none"> pneumatic operation by a lift drive (air/spring or air/air) manual operation by a crank-handle (open ☺ / close ☻)
Activation:	<ul style="list-style-type: none"> Pneumatically over a 3/2-way solenoid valve (see "Pneumatic valve activation")

Description of function - Lift actuator

Normally closed (NC) Basic position: Valve close	
pneum. operated	→ opens the valve
<u>undivided</u> pneum. operated	→ spring force closes the valve

normal open (NO) Basic position: Valve open	
pneum. operated	→ valve "CLOSE"
<u>undivided</u> pneum. operated	→ spring force opens the valve

double acting (DA) Basic position: not defined ¹	
pneum. operated	→ opens the valve
<u>undivided</u> pneum. operated	→ valve "CLOSE"

1. The valve position is not defined in case of decrease of pressure in the compressed air line.

Manual drive

The valve is operated manually by turning the hand crank. Turn the hand wheel clockwise to close the valve, and counterclockwise to open it. The axial position of the hand crank remains unchanged. The valve position can be recognised by the position of the cap (K).

Locking device

The drive position can be fixed in any position.

The crank handle is clamped or released by turning the cover (H) clockwise or anti-clockwise.

5.2 Valve basic position:

INFORMATION

- Actuator AIR/AIR : Valve assemblies with double acting actuators will fall into an un-defined stroke position.
- Actuator AIR/SPRING: The basic position of the valve is closed or opened depending on the kind of actuator.

Basic positon: Kind of actuation:	Valve closed Normally closed (NC)	Valve open Normally open (NO)
Type: 5502 S-S Inclined seat valve	 Line A - B closed	 Line A - B open
Type: 5506 S-S Angle valve	 Line A - B closed	 Line A - B open
Type: 5508 SS-S t-valve	 Line A - B closed	 Line A - B open
Type: 5512 SS-SS cross valve	 Line A - B closed	 Line A - B open
Type: 5514 S-S-S Changeover valve	 Line A - B closed Line A - C open	 Line A - B open Line A - C closed
Type: 5516 SS-S-S Changeover valve	 Line A - B closed Line A - C open	 Line A - B open Line A - C closed

Basic position: Kind of actuation:	Valve closed Normally closed (NC)	Valve open Normally open (NO)
Type: 5518 S-SS Loop valve	 <p>Section A - B closed</p>	 <p>Section A - B opened</p>
Type: 5528 S Tank outlet valve	 <p>Line A - B closed</p>	 <p>Line A - B open</p>
Type: 5528 SS Tank outlet valve	 <p>Section A - B closed</p>	 <p>Section A - B opened</p>

5.3 Control system and position indicator

Feedback unit -optional-

Optionally, modular valve control head systems can be installed to the actuator for reading and actuating valve positions. The standard version is a closed system with SPS or ASI-bus switch-on electronics, and integrated 3/2-way solenoid valves. For tough operating conditions we recommend employing a high-grade steel cover.

Feedback unit with finger guard -optional-

For the acquisition of the valve positions over inductive initiators (Sensors), a feedback unit is mounted on the actuation. The enquiry takes place over the position of the piston rod.

5.4 Pneumatic valve activation

Valve function	Pneum. activation via control head with solenoid valves (MV)	Pneum. activation via external solenoid valves (MV external)
----------------	--	--

Kind of actuator: normally closed (NC)		
Valve OPEN by pressurised air	control air feed P → MV1 → P1/LA2	control air feed ext. MV → LA2
Valve CLOSED by spring tension	de-aeration LA2/P1 → MV1 → R	de-aeration LA2 → ext. MV

Kind of actuator: normally open (NO)		
Valve OPEN by spring tension	de-aeration P1/LA1 → MV1 → R	de-aeration LA1 → ext. MV
Valve CLOSED by pressurised air	control air feed P → MV1 → P1/LA1	control air feed ext. MV → LA1

Kind of actuator: double acting (DA)		
Valve OPEN by pressurised air	control air feed P → MV1 → P1/LA2	control air feed ext. MV → LA2
Valve CLOSED by pressurised air	control air feed P → MV3 → P3/LA1	control air feed ext. MV → LA1

- D = De-aeration
- E = sensor mounting
- LA = Air connection
- MV = Solenoid valve
- P = Supply air connection
- R = Ventilation silencer
- S = Slide switch for manual operation of the solenoid valve
- Si = Sensor inductive

6 Commissioning, service and maintenance

6.1 Commissioning

6.1.1 Installation instructions

Fitting position

- The installation position is without importance.

NOTICE

If installed horizontally, some minor residual liquids will remain in the ball-shape of the housing.

6.1.2 General welding guidelines

Sealing elements integrated in weld components must generally be removed prior to welding. To prevent damage, welding should be undertaken by certified personnel (EN ISO 9606-1). Use the TIG (Tungsten Inert Gas) welding process.

CAUTION

Damage and injuries due to high temperature supply

To avoid a distortion of the components, all welding parts must be welded to stress-relieved. Allow all components to cool before assembling.

NOTICE

Damage due to impurities

Impurities can cause damage to the seals and seals area.
Clean inside areas prior to assembly.

6.1.3 Use in EX area

For valves or plants/installations that are operated in the ATEX area, sufficient bonding (grounding) must be ensured. (see e.g. ATEX Directives EC; UKSI 696:2019-Schedule 25)

6.2 Maintenance

RECOMMENDATION

Replacement of seals

To achieve optimal maintenance cycles, the following points must be observed!

- When replacement of seals, all product-contacting seals should be replaced.
- Only original spare parts may be installed.

Maintenance interval

The maintenance intervals depend on the operating conditions "temperature, temperature-intervals, medium, cleaning medium, pressure and opening frequency". We recommend replacing the seals 1-year cycle. The user, however should establish appropriate maintenance intervals according to the condition of the seals.

Lubricant recommendation

	EPDM; HNBR; NBR; FKM; k-flex	-	Klüber Paraliq GTE703*
	Silicone	-	Klüber Sintheso pro AA2*
	Thread	-	Interflon Food*
*) It is only permitted to use approved lubricants, if the respective fitting is used for the production of food or drink. Please observe the relevant safety data sheets of the manufacturers of lubricants.			

Maintenance - Lift actuator

The actuator is maintenance-free and non-removable.

6.3 Cleaning

Cleaning of the inner housing is performed with the pipe cleaning system.

T35		Pin punch	Ø5	-

NOTICE

All threaded joint have right-hand thread.

Unscrew and remove control air, steam resp. cleaning lines and electrical lines, complete feedback unit or control head.

8.1 Valves with manual operating

Assembly valve insert

- Unscrew the clamp coupling (VK).
- Dismount the valve insert (VE) out of the housing.

Replacement wear parts

- Unscrew the piston (1a) from spindle (12) (SW2).
Counter with a pin punch (T32) at the bore hole (B, Ø5mm).

- **NOTICE!**

The holes (B) in the housing (10) and the spindle (12) must be aligned so that the pin punch (T32) can be inserted into the spindle (12).

- **Changeover valve:**
Unscrew the piston plate (9) from piston (1b) (SW1/SW2).
- Remove seal (D6).

- **Changeover valve:**
Unscrew the piston (1b) from spindle (12) (SW2).
Counter with a pin punch (T32) at the bore hole (B, Ø5mm).

- Unscrew the insert (2) from the housing (10), using a hook wrench (T10).

- Remove O-ring (D1), (D2), (D7), seal (D6) and shaft seal (D3).

NOTICE!

- Puncture the O-ring (D1) and (D7) with a needle and remove them carefully from the groove of piston.

8.2 Valves with pneumatic operation

Assembly valve insert

- Connect compressed air to LA2 and pressurize the actuator with air.
 - The piston retracts.

- Unscrew the clamp coupling (VK).
- Remove the complete valve insert with the upper shaft seal (D1) from the housing (VG).
- Disconnect compressed air at LA2 and depressurize the drive - The valve piston move in.
 - The valve piston returns to the basic position.

Replacement wear parts - Valve insert (VE)

- **Changeover valve:** Unscrew the piston plate (9) from piston (1b) (SW1/SW2).
- Remove seal (D7) and O-ring (D6).
- Unscrew the piston (1a) resp. (1b) from spindle (6) (SW2/SW4).
- Remove O-ring (D1).

- Unscrew the insert (2) from the lantern (4) (use a hook wrench).
- Remove O-ring (2) and seal (D3).

- Unscrew the lantern (4) from the actuator (7) (use a hook wrench).
- Remove the O-rings (D4) and (D5) from lantern (4).

- Unscrew the insert (8) from the actuator (7) (use a hook wrench).
- Remove the O-rings (D4) and (D5).

8.3 Tank outlet valve

Assembly valve insert

- Connect compressed air to LA2 and pressurize the actuator with air.
 - The piston retracts.

- Unscrew the clamp coupling (VK).
- Remove the complete valve insert with the upper shaft seal (D1) from the housing (VG).
- Disconnect compressed air at LA2 and depressurize the drive - The valve piston move in.
 - The valve piston returns to the basic position.

Replacement wear parts - Valve housing (VG)

- Unscrew the screw (FI-S).
- Remove valve housing (VG) with flange (FL2) and O-ring (FI-D).
- Dismantling circlip ring (FL-SR) and flange (FL2) from the housing (VG).

NOTICE! Information for the "Disassembly of the valve insert" can be found under Tank outlet valve [▶ 27]

<u>Product name</u>	<u>Function</u>
pneum. Lift actuators	Stroke movement
pneum. Rotary actuators	Rotary movement
Ball valves	Media cutoff
Butterfly valves	Media cutoff
Single seat valves	Media cutoff
Flow control valves	Control of liquefied media
Throttle valve	Control of liquefied media
Overflow valve	Definition of fluid pressure
Double seat valve	Media separation
Bellow valves	Sampling of liquids
Sampling valves	Sampling of liquids
Two way valves	Media cutoff
Tankdome fitting	Prevention of overpressure and vacuum, Tank cleaning
Safety valve	Prevention of overpressure

The manufacturer hereby states that the above product is considered as an incomplete machine in the sense defined in the Directive 2006/42/EC on Machinery. The above product is exclusively intended to be installed into a machine or an incomplete machine. The said product does not yet conform to all the relevant requirements defined in the Directive on Machinery referred to above for this reason.

The specific technical documents listed in Appendix VII, Part B, have been prepared. The Authorized Agent empowered to compile technical documents may submit the relevant documents if such a request has been properly justified.

Commissioning of an incomplete machine must not only be carried out if it has been determined that the respective machine into which the incomplete machine is to be installed conforms to the regulations set out in the Directive on Machinery referred to above.

The above product conforms to the requirements of the directives and harmonized standards specified below:

- Directive 2014/68/EU
- EN ISO 12100 Safety of machinery

Offenbach, 03.01.2022
