Torsion angle

The diagramme alongside this text explains the influence of ROTEX®, ROTEX® GS, RADEX®-NC and TOOLFLEX® couplings on backlash and torsion angle. Due to the high torsion spring stiffness of RADEX®-NC and TOOLFLEX® the torsion angle is very low under torque. However, contrary to the flexible ROTEX® and the backlash-free ROTEX® GS damping of torsional vibrations etc. is not possible.

The KTR-STOP® NC series is a passive clamping and braking system. It serves for generating a clamping/braking force respectively a clamping/braking torque on a cylindrical piston rod or shaft. This results in a deceleration of the rotary motion respectively keeping at standstill. For further details please refer to page 150/151.

ROTEX® GS

Backlash-free jaw couplings

Technical description

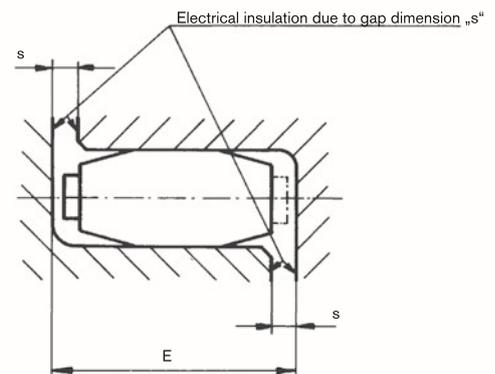

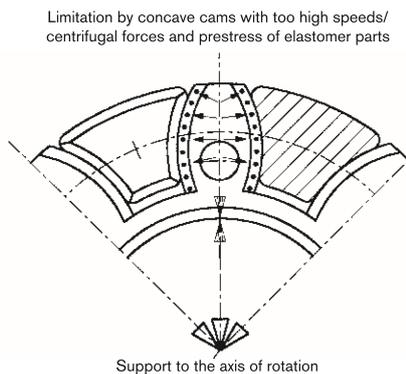

ROTEX® GS is a three-part, axial plug-in coupling backlash-free under prestress. It impresses even with critical applications by its backlash-free power transmission, its stiffness which is each adapted to the application and its optimum damping of vibrations. Using this principle provides for significant options of assembly optimizing the assembly times in production.

The straight spline of the spider mounted under prestress results in a lower surface pressure and consequently higher stiffness of the coupling system. The flexible teeth compensating for misalignment are radially supported in the internal diameter by means of a web. This avoids too high internal or external deformation with high acceleration or high speeds. This is vital for a smooth operation and long service life of the coupling.

The pegs on the spider arranged reciprocally prevent a contact of the spider on the hubs over the full surface. Observing the distance dimension E ensures the ability of the coupling to compensate for displacements.

Observing the gap dimension „s“ ensures the electrical insulation as well as a long service life of the coupling. This mode is gaining more and more importance, due to the increasing precision of shaft encoders and the existing demand for electromagnetic compatibility (EMC).

Technical description

ROTEX® GS HP is a backlash-free, axial plug-in, flexible jaw coupling developed for high-speed drives.

In contrast to the ROTEX® GS coupling this type has got individual elastomers instead of a complete spider.

This allows to design the hubs as a completely enclosed shape so that both the cam section and the pocket part feature higher stiffness against loads in direction of rotation (torque shocks), but also in tangential direction (centrifugal force). The elastomers are embedded in the pocket part so that the high loads resulting from centrifugal forces do not have any negative influence on them and consequently on the overall drive system.

Instead of torques with circumferential speeds of a maximum of 100 m/s for ROTEX® GS P couplings, circumferential speeds up to 175 m/s can be reached with the new ROTEX® GS HP system.

ROTEX® GS

Backlash-free jaw couplings

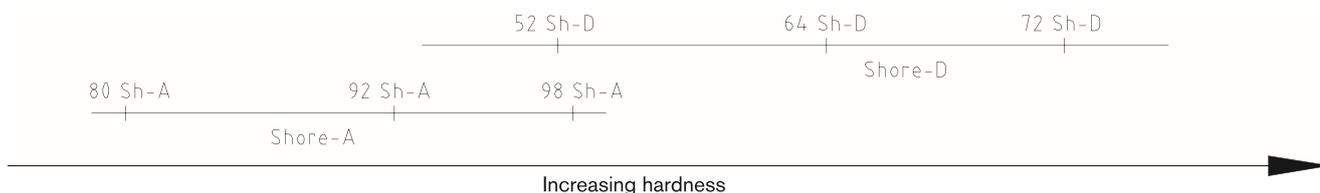

Spiders

The flexible spiders for the GS series are available in five different kinds of Shore hardness, injected in different colours, either as a torsionally soft or hard material. These five spiders with different kinds of Shore hardness allow to easily adjust the ROTEX® GS with regard to torsional spring stiffness and the vibration behaviour to the individual conditions of an application. The flexible prestress varies depending on the coupling size, the spiders/material and the production tolerances. Resulting from it is the axial plug-in force starting from low as a close sliding fit or with torsionally soft spider to heavy with big prestress or torsionally rigid spider (see mounting instruction KTR-N 45510 at www.ktr.com).

Along with an increasing hardness of the spider the torques to be transmitted and the stiffness of the spider increase, too. Along with reduced hardness of the spider the ability of compensating for displacements and damping the spider is increased.

Features						
Description of spider Hardness [Shore]	Marking Colour	Material	Perm. temperature range [°C]		Available for coupling size	Typical applications
			Permanent temperature	Max. temperature (short-time)		
80 ShA-GS		Polyurethane	-50 to +80	-60 to +120	Size 5 to 24	- drives of electric measuring systems
92 ShA-GS		Polyurethane	-40 to +90	-50 to +120	Size 5 to 55	- drives of electric measuring and control systems - main spindle drives
98 ShA-GS		Polyurethane	-30 to +90	-40 to +120	Size 5 to 90	- Positioning drives - main spindle drives - high load
98 ShA-GS 52 ShD-GS		Polyurethane	-30 to +90	-40 to +120	Size 24 to 55 (for ROTEX® GS HP only)	- HSC main spindle drives - test benches with severely high speeds
64 ShD-H-GS 64 ShD-GS		Hytrel	-50 to +120	-60 to +150	Size 7 to 38	- planetary gears/backlash-free gears - higher torsion spring stiffness/high ambient temperatures
		Polyurethane	-20 to +110	-30 to +120	Size 42 to 90	- higher load - higher torsion spring stiffness
72 ShD-H-GS 72 ShD-GS		Hytrel	-50 to +120	-60 to +150	Size 24 to 38	- very high torsion spring stiffness/high ambient temperature - very high load
		Polyurethane	-20 to +110	-30 to +120	Size 42 to 90	- very high torsion spring stiffness - very high load

Degree of hardness

Spider material	Polyurethane			Hytrel
Degree of hardness	92 Shore A	98 Shore A	64 Shore D	64 Shore D
Relative damping ψ [-] ¹⁾	0.80	0.80	0.75	0.60
Resonance factor V_R [-] ¹⁾	7.90	7.90	8.50	10.5

¹⁾ Special figures apply for ROTEX® GS HP, please contact us.

Advice

- Feather keyways available from a bore $\geq \varnothing 6$. Feather keyways according to DIN 6885 sheet 1, tolerance JS9.
- Finish bore tolerance H7 (except for clamping hubs), from $\varnothing 55$ G7 with clamping ring hubs
- Finish bore tolerance H6 for ROTEX® GS P and ROTEX® GS HP
- Recommended insertion dimension of shafts into coupling hubs: l_1/l_2 ; for clamping ring hubs the minimum insertion dimension l_3 applies
- Spider with bore available on request. Please specify in the order as shown in the example on page 130.

Use in potentially explosive atmospheres

ROTEX® GS couplings are suitable for power transmission in drives in potentially explosive atmospheres. The couplings are assessed and approved according to EU directive 2014/34/EU as units of category 2G/2D and thus suitable for the use in potentially explosive atmospheres of zone 1, 2, 21 and 22. Please read through our information included in the respective Type Examination Certificate and the operating and assembly instructions at www.ktr.com.

Selection: If used in potentially explosive atmospheres the clamping ring hubs (clamping hubs without feather keyway only for use in category 3) must be selected in that there is a minimum safety factor of $s = 2$ between the peak torque of the machine including all operating parameters and the nominal torque and frictional locking torque of the coupling.

¹⁾ Static and dynamic torsion spring stiffness with 0.5 x T_{KN}

²⁾ For higher speeds see ROTEX® GS HP

³⁾ When using the spider 72 ShD, we recommend to use hubs made of steel

⁴⁾ Clamping ring hubs 6.0 made of steel

⁵⁾ Hubs with an average bore type 1.0

The coupling has to be dimensioned in that the permissible coupling load is not exceeded during any operating condition (see coupling selection on page 22 et seqq.).

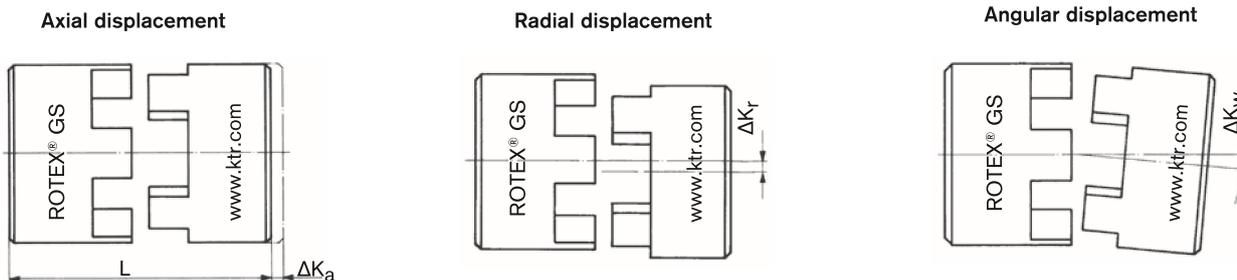

The torques specified T_{KN}/T_{K max} refer to the spider. The shaft-hub-connection needs to be reviewed by the customer.

For technical data of type HP see page 138.

ROTEX® GS

Backlash-free jaw couplings

Notes for displacements

Due to its design the ROTEX® GS is able to absorb axial, angular and radial displacement, without causing any wear or premature failure of the coupling. As the spider is only stressed under pressure it is ensured that the coupling will remain backlash-free even after a longer operation period.

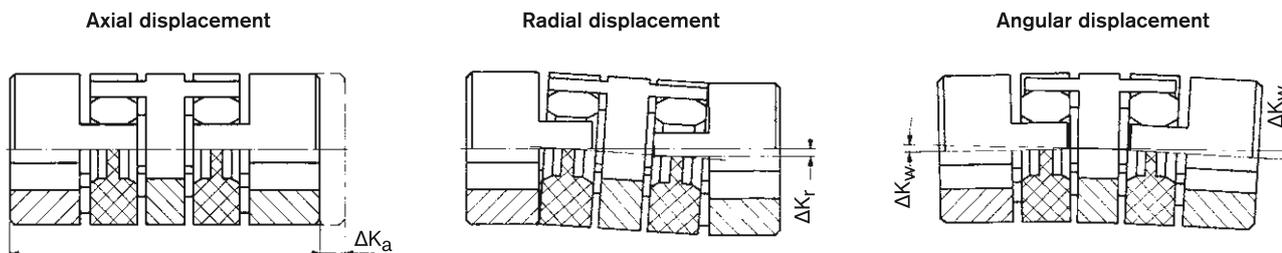

As an example, axial displacement may be generated by different tolerances of the connecting elements with assembly or by alteration of the shaft lengths if fluctuation of temperature occurs. As the shaft bearings usually cannot be axially stressed to a big extent, it is the task of the coupling to compensate for this axial displacement and keep the reaction forces low.

In case of pure angular displacement the imaginary bisecting lines of the shafts intersect in the center of the coupling. Within a permissible range this displacement can be absorbed by the coupling without extensive restoring forces being generated.

Radial displacement results from parallel displacement of the shafts towards each other, caused by different tolerances on the centerings or by mounting the power packs on different levels. Due to the kind of displacement the largest restoring forces are generated here, consequently causing the highest stresses on adjacent components.

In case of larger displacements (especially radial displacements) the ROTEX® GS type DKM double-cardanic system should be used in order to avoid excessive restoring forces.

The permissible displacement figures of the flexible ROTEX® GS couplings specified are general standard values taking into account the load of the coupling up to the rated torque TKN of the coupling and an ambient temperature of +30 °C. The displacement figures may only be used one by one, if they appear simultaneously, they must be limited in proportion. The ROTEX® GS couplings are able to compensate for axial, radial and angular displacements. Careful and accurate alignment of the shafts increases the service life of the coupling.

Shaft misalignment of ROTEX® GS type DKM

This design reduces the restoring forces arising with radial displacement to a minimum, due to the double-jointed operation, additionally the coupling is able to compensate for higher axial and angular misalignment.

ROTEX® GS

¹⁾ The Ka figures specified above have to be added to the length of the respective coupling type.

The displacement figures may only be used one by one, if they appear simultaneously, they must be limited in proportion. Care should be taken to maintain the distance dimension E accurately in order to allow for axial clearance of the coupling while in operation. Detailed mounting instructions are shown on our homepage www.ktr.com.

For technical data of type HP see page 134.

¹⁾ Radial displacements based on a coupling length $L_{ZR} = 1000$ mm

Calculation of overall torsion spring stiffness:

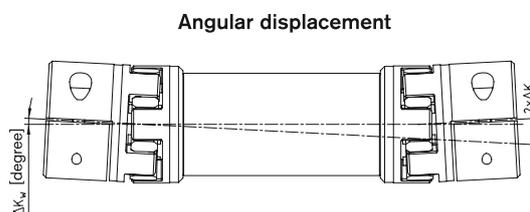

$$C_{tot.} = 2 \cdot \frac{1}{C_1} + \frac{L_{pipe}}{C_2} \quad [\text{Nm/rad}]$$

$$\text{with } L_{pipe} = \frac{L_{ZR} - 2 \cdot L}{1000} \quad [\text{m}]$$

C_1 = torsion spring stiffness for spider see page 120
 C_2 = from table on page 146 - 148

$$\Delta K_r = (L_{ZR} - 2 \cdot l_1 - E) \cdot \tan \Delta K_w$$

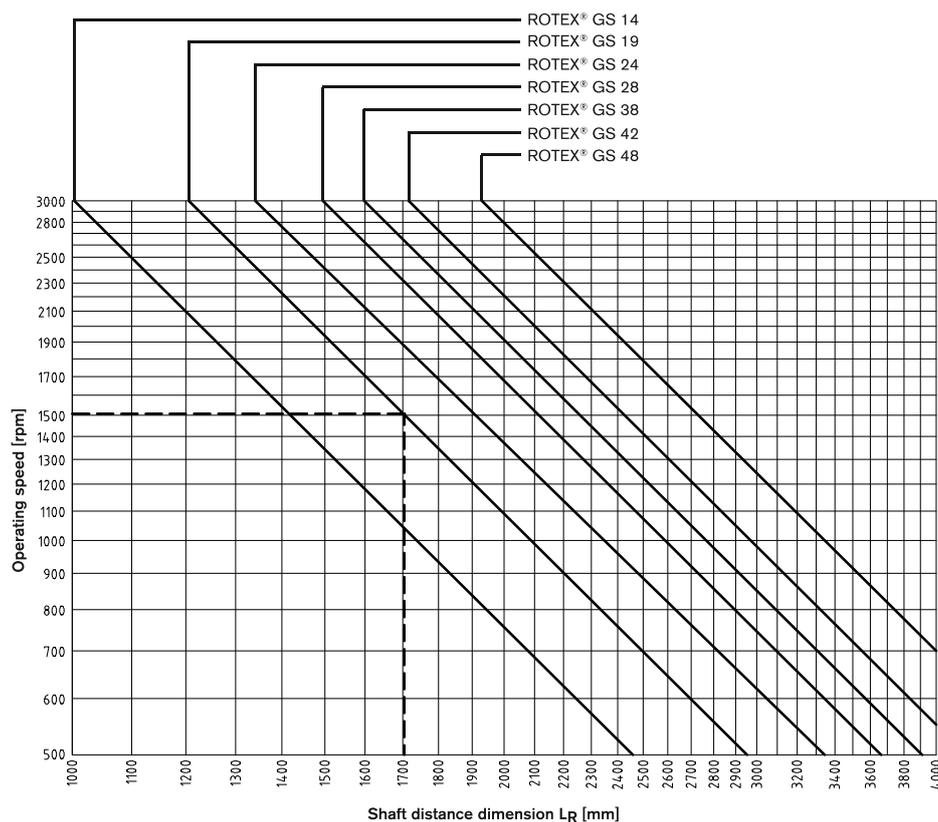

ROTEX® GS

Backlash-free jaw couplings

Types of hubs

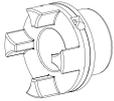

Due to the numerous applications of ROTEX® GS for many different mounting situations, this coupling system is available with various hub types. The different hub types can be combined optionally within one size.

Type 1.0
with feather keyway and setscrew
Positive-locking power transmission, permissible torque depending on the permissible surface pressure. Not suitable for backlash-free power transmission with heavily reversing operation.

Type 1.1
without feather keyway, with setscrew
Non-positive torque transmission. Suitable for backlash-free transmission of very small torques.
(For ATEX category 3 only)

Type 1.5
with hydraulic clamping system
Integrated frictionally engaged shaft-hub-connection for transmitting high torques with easy assembly by means of a screw.

Type 2.0 clamping hub
single slot without feather keyway
Frictionally engaged, backlash-free shaft-hub-connection. Transmittable torques depending on bore diameter. Type 2.0 up to size 14 as standard.
(For ATEX category 3 only)

Type 2.1 clamping hub
single slot with feather keyway
Positive-locking power transmission with additional friction fit. The friction fit avoids or reduces reverse backlash. Surface pressure of the feather keyway connection is reduced. Type 2.1 up to size 14 as standard.

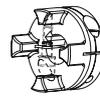

Type 2.5 clamping hub
double slotted, without feather keyway
Frictionally engaged, backlash-free shaft-hub-connection. Transmittable torques depending on bore diameter. Type 2.5 from size 19 as standard.
(For ATEX category 3 only)

Type 2.6 clamping hub
double slotted, with feather keyway
Positive-locking power transmission with additional friction fit. The friction fit avoids or reduces reverse backlash. Surface pressure of the feather keyway connection is reduced. Type 2.6 from size 19 as standard.

Type 2.8 short-type clamping hub C
with axial slot, without feather keyway
Frictionally engaged, backlash-free shaft-hub-connection, good properties of concentric running. Transmittable torques depending on bore diameter. Type 2.8 from size 24 as standard; size 7 - 19 type 2.8 single slotted.
(For ATEX category 3 only)

Type 2.8 short-type clamping hub C
with axial slot, with feather keyway
Positive-locking power transmission with additional friction fit. Surface pressure of the feather keyway connection is reduced. Type 2.9 from size 24 as standard; size 7 - 19 type 2.9 single slotted.

Type 6.0 clamping ring hub
Integrated frictionally engaged shaft-hub-connection for the transmission of higher torques. Screwing on elastomer side. For details about torque and dimensions see page 134/135 and HP page 138. Suitable for high speeds.

Type 6.0 precision clamping ring hub
Type 6.0 high-precision clamping ring hub
Operating principle equal to type 6.0, but highly accurate machining with slight modifications of design. See page 136/138.

Type 7.5 clamping hub type DH
without feather keyway for double-cardanic connections
Frictionally engaged, backlash-free shaft-hub-connection for radial assembly of coupling. Transmittable torques depending on bore diameter. For torques see page 146.

Type 7.6 clamping hub type DH
with feather keyway for double-cardanic connections
Positive shaft-hub-connection with additional friction fit for radial assembly of coupling. The friction fit avoids or reduces reverse backlash. Surface pressure of the feather keyway connection is reduced.

Type 7.8 clamping hub type H
without feather keyway for single-cardanic connection

Type 7.9 clamping hub type H
with feather keyway for single-cardanic connection

Type 4.2 with CLAMPEX KTR 250
Frictionally engaged shaft-hub-connection to transmit high torques with clamping screws externally.

Type 9.0 expansion hub
Frictionally engaged connection for hollow shaft. Transmittable torques depend on bore diameter and hollow shaft.

Special designs on request of customers

Type 6.5 clamping ring hub
Design equal to 6.0, but only clamping screws externally. As an example for radial disassembly of intermediate pipe (special design).

* Standard bore tolerance H7, special tolerances on request * From Ø55 tolerance G7/m6

The friction torque is reduced with bigger fitting tolerances. Steel or nodular iron with a yield strength of approx. 250 N/mm² or more can be used as shaft material. For strength calculation of shaft/hollow shaft see KTR standard 45510 on our homepage www.ktr.com.

55	H6/k6													1220	1440	1455	1604	1635	2026

* From Ø55 G6/m6.

The friction torque depends on the speed.

The friction torque is reduced with bigger fitting tolerances. For the strength calculation of shaft/hollow shaft see KTR standard 45710 at our homepage www.ktr.com.

Technical data

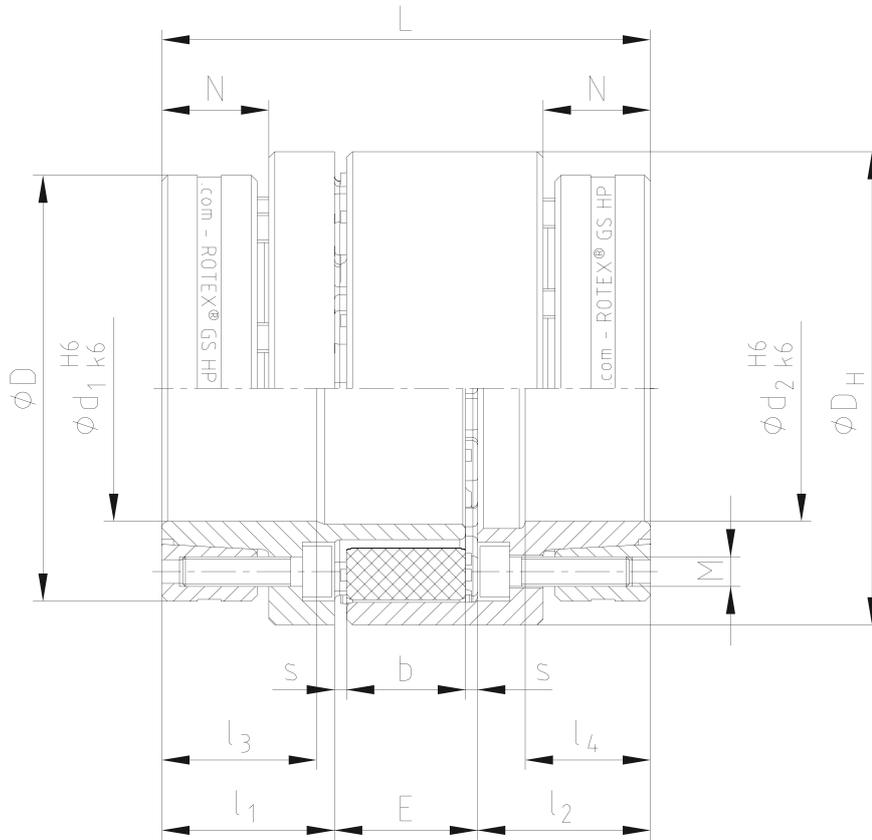

Size	Spider GS	Displacements			Torsional stiffness [Nm/rad]	
		Axial ΔK _a [mm]	Radial ΔK _r [mm]	Angular ΔK _w [degree]	C _T stat.	C _T dyn.
24	98 ShA				3,780	10,950
28	98 ShA	+1.0/-0.8	0.10		7,760	23,980
38	98 ShA				27,800	70,000
42	52 ShD			0.9	52,950	101,750
48	52 ShD	+1.4/-1.0	0.14		64,140	128,530
55	52 ShD				87,500	198,900

The displacement figures may only be used one by one, if they appear simultaneously, they must be limited in proportion. Care should be taken to maintain the distance dimension E accurately in order to allow for axial clearance of the coupling while in operation. Detailed mounting instructions are shown on our homepage www.ktr.com.

¹⁾ For selections see page 22 et seqq/other spiders see page 123 and following

²⁾ With d_{max.}

³⁾ Torsion spring stiffness with a length of 1 m of intermediate pipe with L_{pipe} = L_{ZR} - 2 • L

For inquiries and orders please specify the shaft distance dimension L_R along with the maximum speed to review the critical bending speed. See diagramme on page 127.

The intermediate pipe can be combined with other hub types, but in that case it can no longer be disassembled radially. Please specify the shaft distance dimension required in your order.

With vertical application a support washer has to be used (please specify in your order).

Insertion dimension of shaft I₃, to make sure that the coupling can be assembled/disassembled radially.

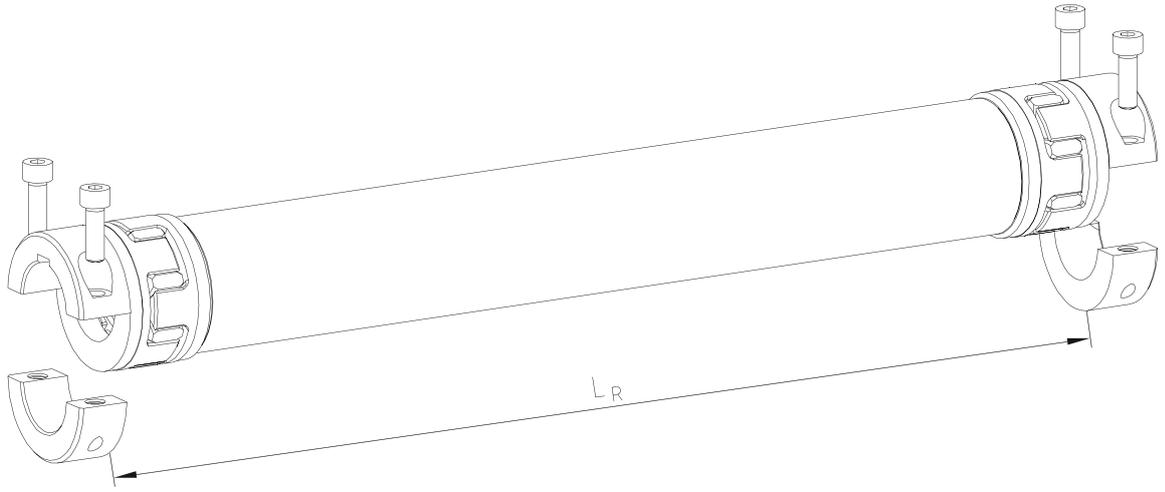

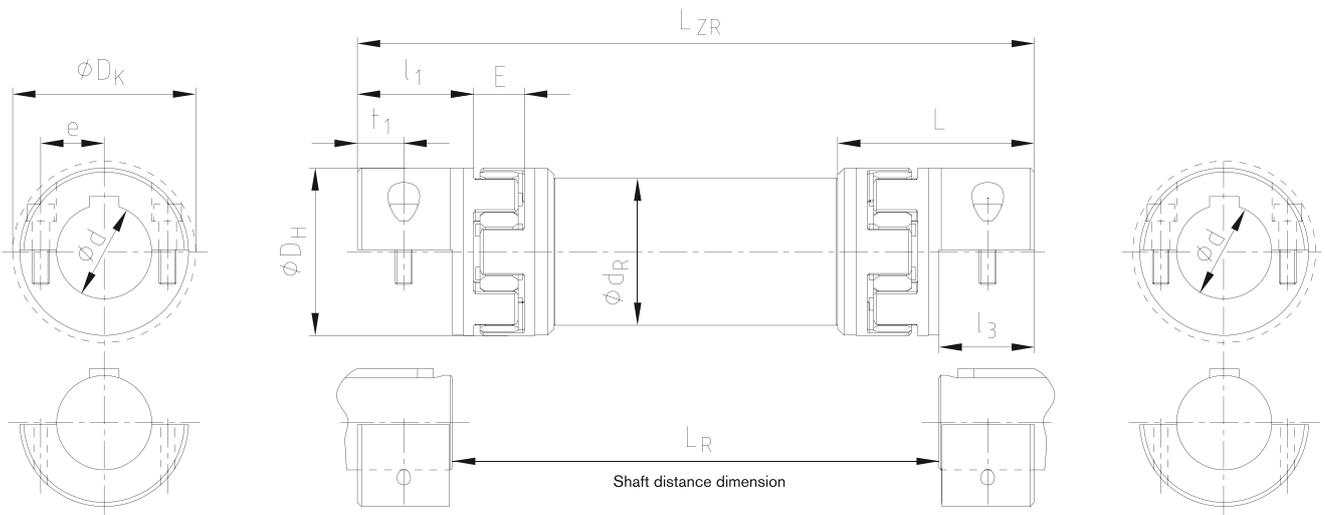

Straightness/concentricity of pipes according to DIN EN 755-1.

Review of shaft-hub-connection: Friction torques T_R [Nm] for hub type 7.5

ROTEX® GS 24	ZR3	1200 mm	98 ShA-GS	7.5 - Ø24	7.5 - Ø24
Coupling size	Type	Shaft distance dimension (L _R)	Spider hardness	Hub type	Finish bore

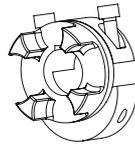

Types of hubs

Type 7.5

Clamping hub type DH without feather keyway for double-cardanic connections

Type 7.6

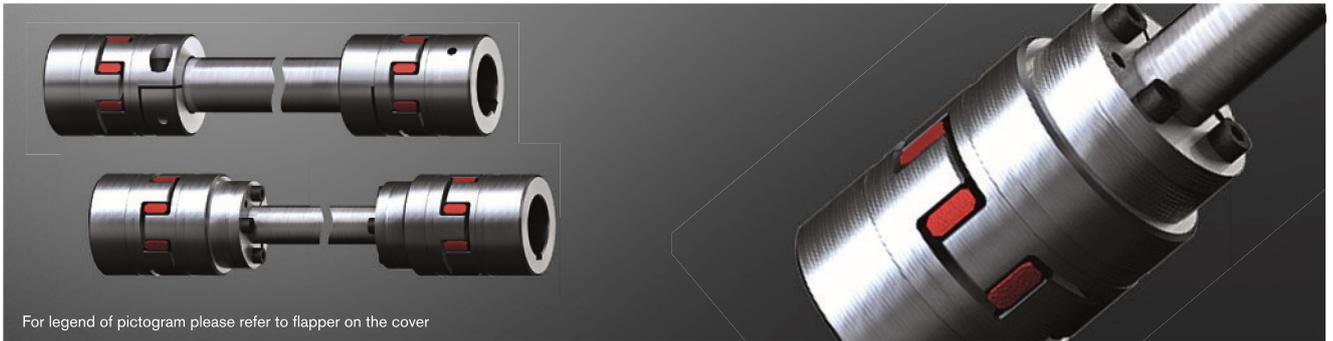

Clamping hub type DH with feather keyway for double-cardanic connections

ROTEX® GS ZR1 and ZR2

Backlash-free intermediate shaft couplings

Intermediate shaft couplings with steel pipe/steel shaft

For legend of pictogram please refer to flapper on the cover

¹⁾ For selections see page 22 et seqq/other spiders see page 123 and following

²⁾ Dependent on hub type. Hub types can be freely selected, for summary see page 128.

³⁾ Has to be remachined, if necessary.

⁴⁾ Torsion spring stiffness with a length of 1 m of intermediate pipe.

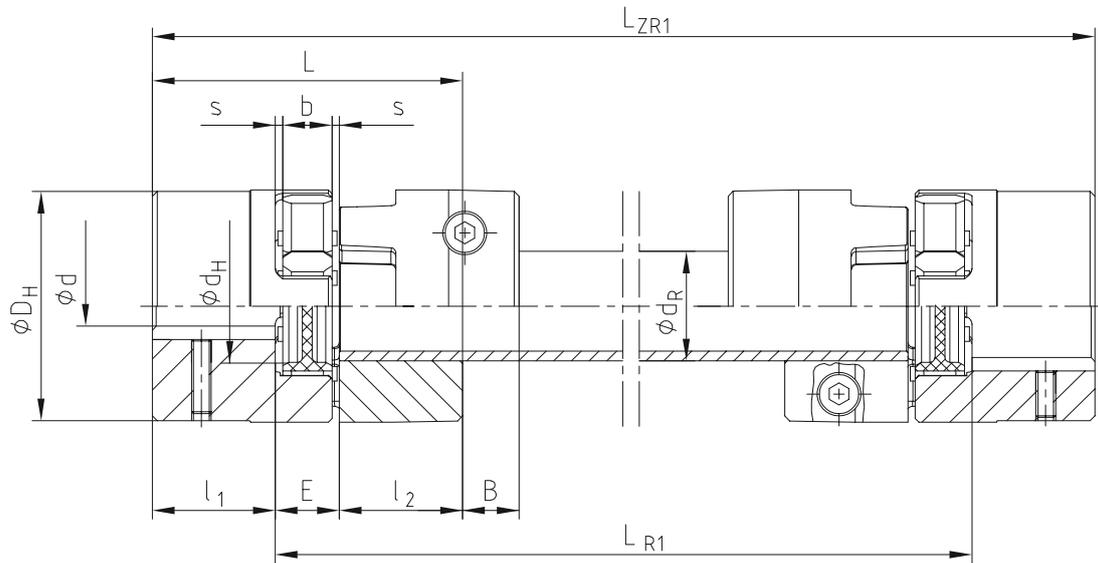

For inquiries and orders please specify the shaft distance dimension LR₁/LR₂ along with the maximum speed to review the critical **bending speed**.

With vertical application a support washer has to be used (please specify in your order).

Straightness/concentricity of pipes according to DIN EN 10305-1.
