productinformation

tesa® 4101 PV2

Adhesive film of hydrate cellulose for packaging

tesa® 4101 PV 2 is based on a hydrate cellulose film coated with a rubber adhesive. The backing, which is composed of a sustainable material, is characterized by a high rigidity and low electrostatic charging. For this reason long strips of the tape can be dispensed without any curling effect is possible. The tape can easily be torn by hand.

Hydrate cellulose film can be cleanly cut (separated) by an subjacent tesa® tear strip.

Main Application

tesa® 4101 PV 2 is mainly used for general packaging purposes, such as sealing of small boxes. The tape can be easily applied with tesa® desk dispensers.

Technical Data

Backing material	hydrate cellulose
Total thickness	51 μm
Type of adhesive	synthetic rubber

Adhesion to steel	6 N/cm
Elongation at break	25 %
Tensile strength	42 N/cm
