

econ®

Butterfly Valves Series 67 & 68

Building services
HVAC

Proven quality since 1892

More than 125 years of application experience, research and product development forms the basis of the todays Econ® product designs. The resilient seated butterfly valve series 67 and 68 are the example of well-engineered products at a very competitive price.

Applications

The series 67 and 68 butterfly valves have been developed for building services, greenhouses and food & beverage applications, but have proven to perform well in the below mentioned markets:

Markets

- HVAC / Building services
- Greenhouses
- Food & Beverage
- Marine / Shipbuilding
- Mining
- Steel production
- Desalination, water and waste water treatment
- Pulp & Paper

DVGW

The series 67 and 68 butterfly valves have been tested according the EN 13774 standard and have been approved by DVGW for gas distribution applications up to a pressure of 16 bar.

Food contact materials

EC1935 and FDA approved

The butterfly valve versions with TFM (modified PTFE) lined rubber seats are designed for food applications. The disc and the seat, parts which are in contact with foodstuff, have been migration tested by an external laboratory and do fully comply with the EC1935 and FDA regulations.

Lug type
DVGW-certified
Fig. 68321

Wafer type with TFM 1600 seat and
stainless steel polished disc for food
applications Fig. 6731

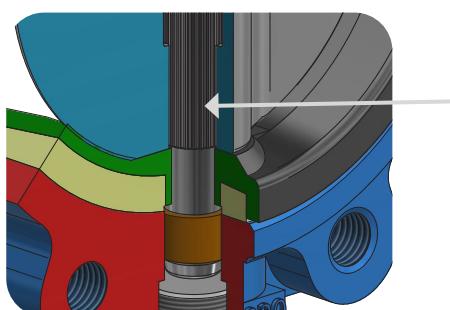

Design

The series 67 and 68 valves have a robust one-piece stem design with a free of play spline disc-stem connection. The valves have a replaceable seat which covers the full body as a liner and isolates flowing media from the valve body and stem.

Fig. 6731 - Wafer type with centring lugs and hand lever

- Valve design according to EN 593, API 609 and ASME B16.34
- Anti-blow out stem design
- Top-flange according to ISO 5211
- Phenolic or aluminium backed seat
- Face to face dimension according to EN 558 Series 20, ISO 5752 series 20 and API 609 Category A
- Size range DN25 - DN600 [1" - 24"]
- Size range TFM 1600 seated valves DN40 - DN300 [1.1/2" - 12"]
- Splined stem-disc connection DN25 - DN300 [1" - 12"]. Larger valve dimensions have a pinned stem-disc connection
- To be mounted between flanges according to EN 1092-1 and 2 (flange type 11) and/or ASME B16.5. Remark: Series 68 in DN65 with 4 bolt holes, 8 holes on request
- Bidirectional bubble tight shutoff according to EN 12266-1 leakage rate A and API 598
- Pressure classes and flange connections
 - Wafer type:
 - Size DN25 - DN300 [1"- 12"]: PN6, PN10, PN16 and class 150
 - Size DN350 - DN400 [14"- 16"]: PN10, PN16 and class 150
 - Size DN450 - DN600 [18"- 24"]: PN10 or PN16 or class 150
 - Lug type
 - Size DN25 - DN150 [1"- 6"]: PN10 and PN16 or class 150
 - Size DN200 - DN600 [8"- 24"]: PN10 or PN16 or class 150
- Delta P max.: 10 bar (145 psi) or 16 bar (232 psi)

Splined stem-disc connection

The replaceable rubber valve seat is vulcanized on a phenolic or aluminium back-up ring. This construction makes this valve very well suitable for both high velocity flow and vacuum applications. The series 68 lug type is not suitable for dead-end services. For this application we recommend using the Econ® butterfly valve series 64 or 58.

Fig. 6822 - Lug type with gear box

Disc and seat selection

Due to the rubber seated butterfly valve design, only the disc and the seat are in contact with the medium and therefore these parts must be made of materials which have a good chemical resistance to the medium.

The upper temperature limitation of the valve is limited by the seat material. The lower temperature limitation is either limited by the valve body or seat material. In this case the valve body is always made of ductile iron. See the below table for more information and the available seat materials.

Available seat materials	Temperature limitations	
EPDM	-10° ~ +110°C	[14° ~ 230°F]
NBR / BUNA-N	-10° ~ +80°C	[14° ~ 176°F]
FPM / FKM	-10° ~ +180°C	[14° ~ 356°F]
TFM 1600 lined EPDM (food grade)	-10° ~ +110°C	[14° ~ 230°F]

According to EN 593 [Industrial valves - Metallic butterfly valves for general purposes] ductile iron butterfly valves may be used down to a minimal temperature of -10°C!

Coating

Series 67 and 68 butterfly valves have a one layer UV-resistant Polyester powder coating for high durability and good chemical resistance.

Butterfly Valves | Series 67 & 68

Parts and materials

Pos.	Part	Material
1	Body	A536-65-45-12 [EN-GJS-400-15] + Polyester powder coating
2	Stem	AISI 410 [1.4006] up to DN150 (6") and AISI 431 [1.4057] for larger sizes
3	Disc	A351-CF8M [1.4408] or CC333G [B148-C95800]
4	Seat	EPDM, NBR, FKM [FPM] or TFM 1600 lined EPDM [food grade]
5	Seat back-up ring	DN25 - DN350 (1" - 14"): Phenolic * DN400 - DN600 (16" - 24"): Aluminium

Pos.	Part	Material
6	Anti-blow-out washer and circlips	AISI 304 [1.4301]
7	Top stem bearings	PTFE coated ASTM-A36 bushings
8	Bottom stem bearing	Brass bearing bushing
9	Stem plug	Galvanized carbon steel
10	Bottom gasket	PTFE

* Butterfly valves with a TFM 1600 [modified PTFE] lined seat have a Polyester back-up ring and a AISI 431 [1.4057] stem.

Features

ISO-top flange and square stem connection for direct actuator mounting. No mounting set needed.

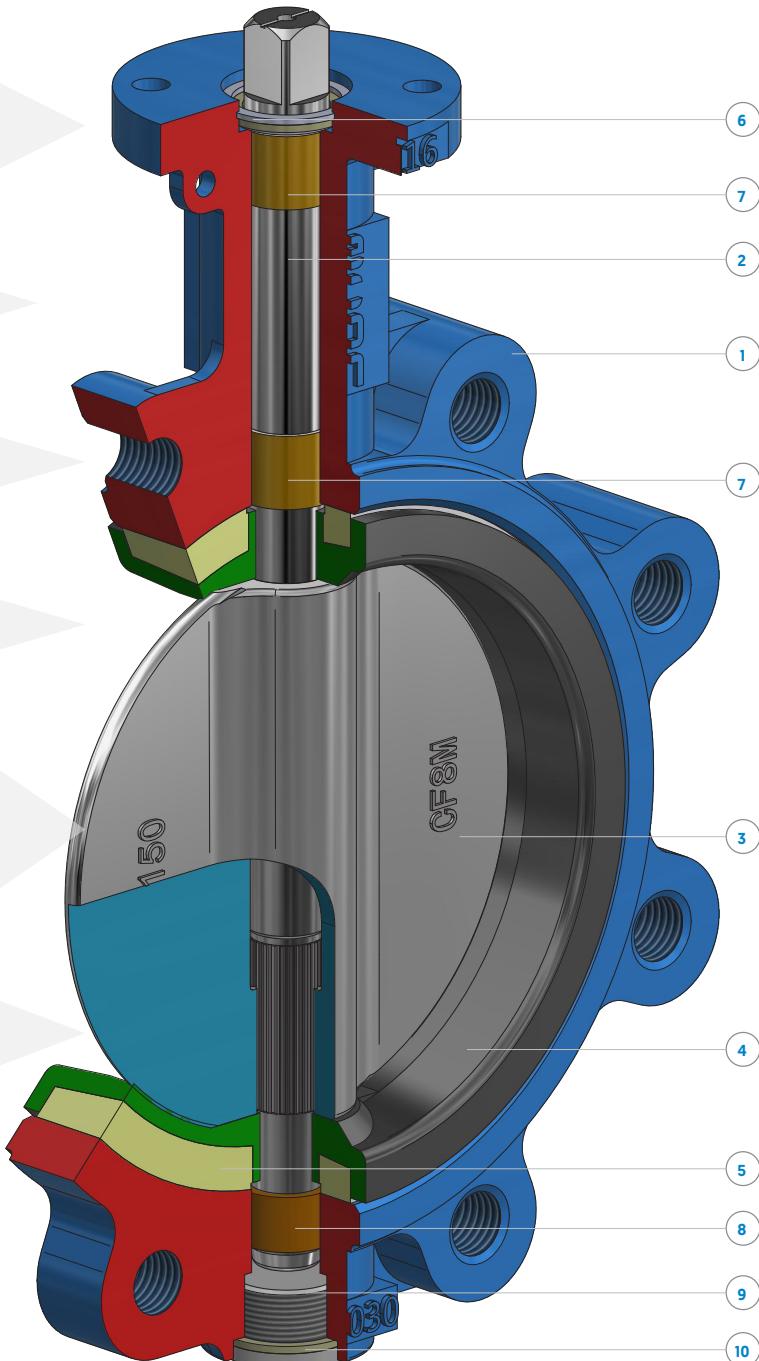

Blow out proof stem

Three point stem bearing for high cycle durability

Wafer type body or lug type body

Replaceable phenolic or aluminium backed seat. Seats available in several compounds, also for food applications in compliance with FDA and EC 1935 regulations

Free of play spline stem-disc connection.
Easy disassembly of the valve.

Hand Operated valves

Econ® butterfly valves can be hand operated by means of a hand lever up to size DN200/8" or a worm gearbox for all sizes.

Hand levers have a notching plate in order to put them in intermediate positions. These positions are also lockable by use of a padlock.

Hand levers with intermediate locking positions:

1. Fig. 4001J - Robust malleable iron hand lever with a stainless steel AISI 304 notching plate DN25 - DN200 [1" - 8"]
2. Fig. 4001K - Lightweight aluminium hand lever DN25 - DN150 [1" - 6"]

Both hand levers can be locked with a padlock.

Worm gearboxes are available for all valve sizes and are useful in situations in which the valve operating space is limited.

Three worm gearboxes are available:

Fig. 4002 | Lightweight aluminium gearbox for indoor use

Fig. 4023 | Heavy duty cast iron gearbox for indoor use

Fig. 4025 | Heavy duty cast iron gearbox for outdoor use, including UL-vane

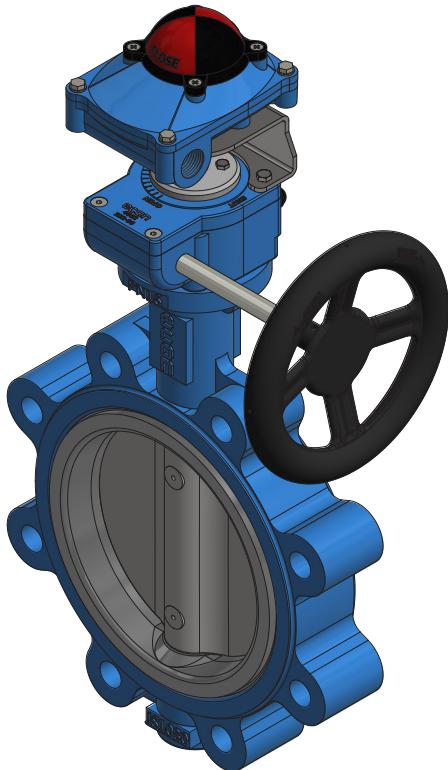

Fig. 6832 DN150 with gear box
Fig. 4002 and switch box **Fig. 79651**

Fig. 6731 DN100 with hand lever **Fig. 4001J** and inductive dual sensor **Fig. 79655**
in combination with mounting plate **Fig. 7964**

Lever and gear box operated valves can also be equipped with a switch box or inductive dual sensors for position feedback.

Butterfly Valves | Series 67 & 68

Automated valves

Econ® butterfly valves have a direct-mount ISO-top flange and square stem connection.
All Econ® actuators can be mounted on the valve, without the use of a bracket and coupler.

For remote controlled valves Econ® has 4 automation options available:

1. Pneumatic operated

- a. Rack & Pinion double acting or spring return actuator
Fig. 7902 and 7901 [Metric] or Fig. 7951 and 7952 [Imperial]
- b. Scotch Yoke double acting or spring return actuator
Fig. 7991 and 7992.

Features:

- High cycle life
- Quick opening and closing times
- Torque output up to 6,421 Nm (56,831 in-lb)
- Relatively inexpensive type of automation if a large amount of remote operated valves are needed

2. Electric operated - 115, 230, 380 or 440 VAC 50/60Hz, 24VDC or 24VAC

- a. Open-close actuator - *Fig. 7907*
- b. Fail-safe actuator with rechargeable battery pack – *Fig. 7907RBP*
- c. Fail-safe spring return actuator – *Fig. 7917*
- d. Modulating actuator – *Fig. 7907MOD*
- e. Explosion proof [Exd] versions

Features:

- Relative short cycle life compared to pneumatic actuators
- Relatively long operation/cycle times
- Torque output up to 3.000 Nm (26,552 in-lb)
- Relatively inexpensive type of operation if only a few remote operated valves are needed and if no air supply is present
- SIL 2 capable. SIL 3 capable in a redundant setup
- Optional fieldbus communication protocols: Modbus, CANopen, Profibus and AS-interface

3. Hydraulic operated

- a. Compact double acting or spring return Helical actuator
Fig. 21204, 21202 and 21201
- b. Rack & Pinion double acting or spring return actuator
Fig. 21501 and 21502
- c. Scotch Yoke double acting or spring return actuator
Fig. 7991 and 7992

Features:

- **Extremely robust construction**
- **Very compact compared to pneumatic actuators, especially the helical actuator**
- **Torque output up to 250,000 Nm (2.2 million in-lb)**
- **Submersible**

4. Electro-hydraulic operated

- a. Compact double acting or spring return Helical actuator
- b. Rack & Pinion double acting or spring return actuator
- c. Scotch Yoke double acting or spring return actuator

Features:

- An Econ® local power unit (LPU) can be mounted on all Econ hydraulic actuators and is available in a single acting version (Fig. 21301) and a double acting version (Fig. 21302).
- CANopen fieldbus communication is optional

CANopen®

Butterfly Valves | Series 67 & 68

Valve automation accessories for Rack & Pinion and Scotch Yoke actuators

Switch boxes

Econ® Fig. 79650, 79651, 79652 and 79653

- Position feedback device for open, closed or intermediate positions. Also available with a potentiometer and position transmitter for a 4-20mA or 0-10V feedback signal
- The switch boxes can be equipped with mechanical switches or Pepperl and Fuchs proximity sensors
- Econ® switch boxes can also be mounted on actuators for 3-way L- or T-port valves
- Aluminium or stainless steel IP67 or IP68 enclosure
- Fig. 79653 for explosion proof applications (ATEX-classified for zone 1 and 21)
- SIL 2 capable. SIL 3 capable in a redundant setup

Solenoid valves

Fig. 33580

- Namur pilot solenoid valves for direct mounting
- Voltages: 24 AC, 115 AC, 230 AC and 24 DC
- For double acting and single acting actuators (3/2 and 5/2 function)
- Aluminium IP65 enclosure
- DIN 43650 connector

Inductive dual sensors

Econ® Fig. 79654, 79655, 79656, 79657, 79658 and 79659

- Compact construction with sturdy plastic IP67 enclosure
- Cable connection types: Plug-in terminal strip, M12 male connector or 2 meter PVC cable
- 2-wire DC sensor with minimum off-state (leakage) current; max. 0,2 mA. Compatible with all modern PLC's and DCS-systems (only for fig. 79654, 79657 and 79658)
- Fig. 79658 for explosion proof applications (ATEX-classified for zone 2 and 22)

Smart positioners

Fig. 3303 and 3304

- For modulating applications
- Automatic calibration
- Input signal 4-20mA
- Additional modules available for 4-20mA feedback signal or
- HART protocol communication
- Pressure gauges can be mounted on this positioner as an option.
- ATEX versions available for explosion proof applications (ATEX-classified for zone 1 and 21)

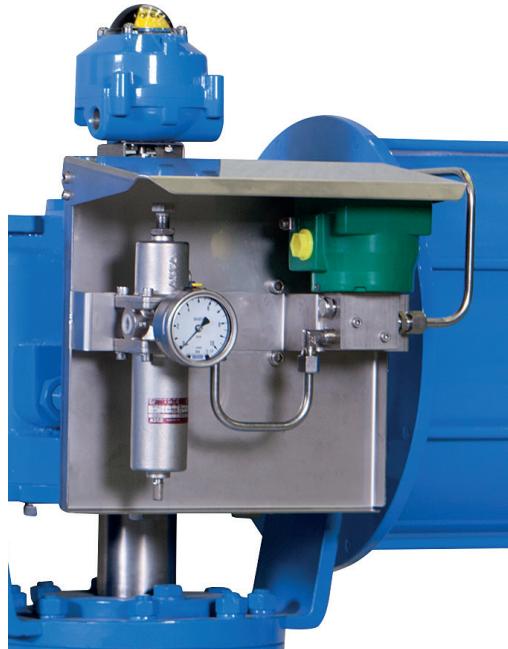

HART
COMMUNICATION PROTOCOL

Control panels and cabinets

- Customized solutions based on the functional needs
- Different designs depending on weather effects and environmental influences

Scotch Yoke actuators

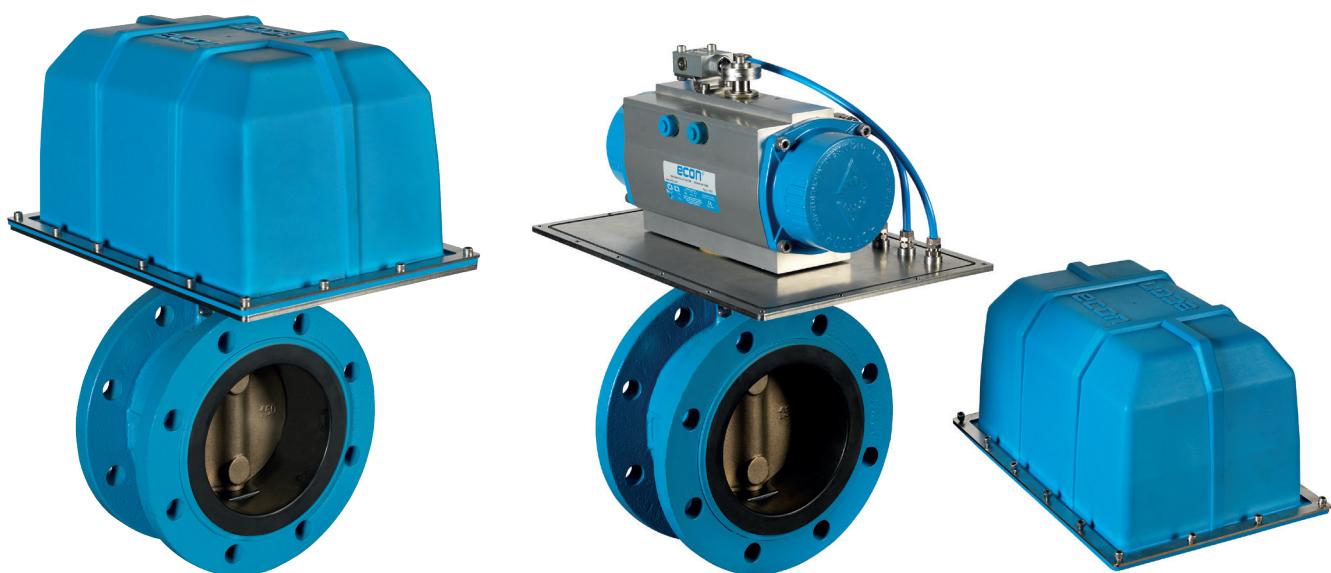

Fig. 7991 and 7992

- Torques up to 250.000Nm
- Double acting and spring return versions
- Pneumatic and hydraulic operated
- ATEX-classified for zone 1,2, 21 and 22
- Safety Integrity Rating IEC 61508 SIL 2
(SIL 3 in redundant configuration)

Actuator protector (DOME)

- Protects the actuator against highly corrosive environments
- Special version available for submerged applications up to 20 meters (65 feet).

Notes:

- Torque values for valves with an EPDM or NBR seat in water of 0°C (32°F) up to 80°C (176°F) without solid particles.
- For valves with a FPM/FKM seat an additional factor of 1,2 must be applied on top of the EPDM/NBR torque values.
- Solid particles and fouling of the disc and seat will lead to high torques and accelerated wear.
- High flow velocities (> 4 m/s or 13,1 ft/s) will generate a dynamic torque due to pressure differences across a partly opened valve disc. Please contact your distributor in order to have this dynamic torque calculated.

Application and safety factors for actuator sizing:

- Standard sizing for lubricating media, like water - 1,3
- Sizing for lubricating media and less than once per week operated - 1,5
- Sizing for lubricating media and less than once per month operated - 1,8
- Sizing for (dry) gases and abrasive media - 1,8
- Sizing for media with temperatures below 0°C (32°F) - 1,8

Flow data

Flow data of isolating valves is usually needed for pipe dimension calculations and pressure losses when the valve is in the fully open position. Most of the open/closed isolating valves are in the fully open position the most of the time and therefore these valves should have a high Kv-value in order to reduce pressure drops and with this increasing plant efficiency and reducing energy costs.

Butterfly Valves | Series 67 & 68

Econ® Resilient Seated Butterfly Valve Portfolio

Series 67 and 68 | Replaceable rubber seat on a back-up ring

Design | Concentric design, replaceable seat

Main applications | Building services, Greenhouses

Valve types | Wafer type and lug type

Size range | DN25 up to DN600 (1" up to 24")

Flange connections | EN 1092-2 PN6, PN10 and PN16
ASME B16.5 Class 150

Operation | Lever, worm gearbox, pneumatic,
electric or hydraulic actuator

Available seats and discs

Series 67 with TFM1600
lined EPDM seat

Series 67

Series 68

Fig. 67311 and 68311 (with hand lever) | Fig. 67321 and 68321 (with gear box)

Replaceable rubber seat on a phenolic back-up ring

Design | Concentric design, replaceable seat

Main applications | Valves for gas distribution systems with a maximum operating pressure less than or equal to 16 bar (EN 13774). Fuel gas applications of the first, second and third family, according to EN 437.

- 1st: Gases made of coal or oil products
- 2nd: Natural gas
- 3rd: LPG (Liquid Petroleum Gas)

Valve types | Wafer type and lug type

Size range | DN50 up to DN600 (2" up to 24")

Flange connections | EN 1092-2 PN6, PN10 and PN16
ASME B16.5 Class 150

Operation | Lever, worm gearbox, pneumatic,
electric or hydraulic actuator

Available seats and discs

Fig. 67311

Fig. 68321

Seats	Discs
DVGW-approved NBR / Buna-N	Stainless steel

Series 63 and 64 | Replaceable rubber seat

Design | Concentric design, replaceable seat

Main applications | Industrial, Food & Beverage

Valve types | Wafer type and lug type

Size range | DN50 up to DN600 [2" up to 24"]

Flange connections | EN 1092-2 PN6, PN10 and PN16
ASME B16.5 Class 150

Operation | Lever, worm gearbox, pneumatic,
electric or hydraulic actuator

Series 63

Available seats and discs:

Seats	Discs
EPDM-HT	Stainless steel
EPDM-FDA [food grade]	Aluminium-bronze
NBR-HT / BUNA-N	Ductile iron with Rilsan coating
FKM / FPM	Ductile iron with ECTFE coating
H-NBR	Duplex
MVQ - Silicone	Hastelloy
CR - Neoprene	
CSM - Hypalon	
ECO - Epichlorohydrin	

Series 46, 57, 58, 60 and 61 | Non-replaceable rubber seat, vulcanized to the valve body

Design | Concentric design, seat bonded to the valve body

Main applications | Maritime / Shipbuilding and Offshore

Valve types | Double flanged, wafer type, lug type and mono flange type

Size range | DN40 up to DN1600 [1.1/2" up to 64"]

Flange connections | EN 1092-2 PN6, PN10 and PN16
ASME B16.5 Class 150
JIS 5K, 10K and 16K

Operation | Lever, tilting lever, worm gearbox, pneumatic,
electric or hydraulic actuator

Body materials | Ductile iron or aluminium-bronze

Series 46

Series 57

Series 58

Series 60 and 61

Seats	Discs
NBR / Buna-N	Aluminium-bronze

Butterfly Valves | Series 67 & 68

Series 46-KIWA, 57-KIWA, 58-KIWA, 60-KIWA and 61-KIWA

Non-replaceable rubber seat, vulcanized to the valve body

Design | Concentric design, seat bonded to the valve body

Main applications | Drinking water

Valve types | Double flanged, wafer type, lug type and mono flange type

Size range | DN50 up to DN1600 [2" up to 64"]

Flange connections | EN 1092-2 PN6, PN10 and PN16

Operation | Lever, tilting lever, worm gearbox, pneumatic, electric or hydraulic actuator

Body materials | Ductile iron

CERTIFIED FOR WATER

Series 46-KIWA

Series 57-KIWA

Series 58-KIWA

Series 60-KIWA

Available seats and discs:

Seats	Discs
EPDM-KIWA	Stainless steel
	Duplex

Series 48 | Non-replaceable rubber lined disc

Design | Concentric design, rubber seal vulcanized on the disc

Main application | Building services

Valve types | Grooved ends connections

Size range | DN50 up to DN300 [2" up to 12"]

Pipe connections | PN16, grooved connections according to ANSI/AWWA C606-97

Operation | Lever or worm gearbox

Body materials | Ductile iron

Available seats/discs | Ductile iron EPDM or NBR (Buna-N) lined

Fig. 4801

Fig. 4802

Series 921, 922 and 923 | Replaceable rubber seat, vulcanized on a stainless steel ring

Design | Double eccentric design, replaceable seat

Main applications | Offshore, FPSO, FSO and Maritime / Shipbuilding

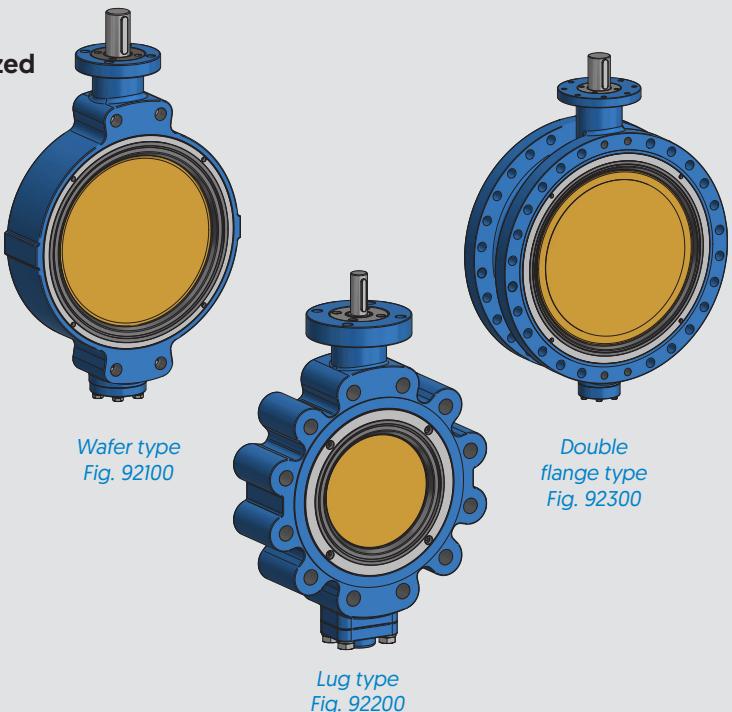

Valve types | Double flange, wafer type and lug type

Size range | DN100 up to DN1200 [4" up to 48"]

Flange connections | EN 1092-1 PN10, PN16 and PN25,
ASME B16.5 Class 150, JIS 5K, 10K and 16K

Operation | Lever, worm gearbox, pneumatic, electric or hydraulic actuator

Body materials | Ductile iron, cast steel, stainless steel and aluminium-bronze

Available seats and discs:

Seats	Discs
EPDM	Ductile Iron, Rilsan coated
NBR / Buna-N	Aluminium-bronze
FKM / FPM	Stainless steel
PTFE lined NBR or FKM	Monel

Series 49 | Replaceable PTFE seat

Design | Concentric design, replaceable seat

Main applications | Chemical industry, corrosive and abrasive liquids or gases

Valve types | Wafer type and lug type
